Software Engineering 2

Aufgabe 4: Robot

Implement a robot that moves in a coordinate system.

The direction is NORTH, EAST, SOUTH or WEST.

Use exceptions for invalid coordinates.

```
public class Robot {
    private int currentX;
    private int currentY;
    private Direction direction;

    public void moveForward() {
        // Update coordinates in the current direction.
    }
}
```
